

Ahmed Mohamed Abdelatif

Python Backend Developer | AI Automation Specialist

Cairo, Egypt | ahmееedmohaaamed1@gmail.com | github.com/ahmed-abdelatif | linkedin.com/in/ahmed-mohamed-b69920435

About

Python Backend Developer with hands-on experience building REST APIs, automation workflows, and AI-powered systems using FastAPI, PostgreSQL, and Redis. Completed a 3-month on-site role at H2M, where I built Meta WhatsApp Cloud API integrations, product analytics tools, and automated marketing dispatches. Currently pursuing B.Sc. in Computer Science at ECU (Expected 2029). Seeking a Backend or AI Automation role where I can contribute to production systems and grow as an engineer.

How I Work:

Build from the problem: Understand what the system actually needs before choosing the implementation. | Keep systems practical: Prefer simple, maintainable solutions over unnecessary complexity. | Design for change: Separate services and integrations so systems can evolve without rewriting everything.

Work Experience

Backend Developer - H2M - MAXP Online Platform

Full-time | On-site | Cairo, Egypt | 3 Months

- Built REST APIs for product pricing, profitability calculation, and shipping analytics using Python and FastAPI.
- Developed marketing campaign tracking dashboards with PostgreSQL for real-time business intelligence.
- Implemented Meta WhatsApp Cloud API integrations using webhooks for automated customer messaging workflows.
- Built automated reply systems and scheduled marketing dispatches with Redis/RQ background processing.

Workflow: Webhook -> FastAPI -> Business Logic -> PostgreSQL -> Redis/RQ -> WhatsApp API

Engineered Projects

AI Customer Support Platform

Backend system that receives customer messages via WhatsApp webhooks, classifies intent using an AI service layer, stores conversation history in PostgreSQL, and generates automated draft responses asynchronously.

- Built REST APIs for customer conversations, tickets, and message management with Pydantic validation.
- Implemented intent detection layer classifying messages into billing, technical, and general categories.

Tech: Python | FastAPI | PostgreSQL | Redis/RQ | Docker | Pytest

Enterprise RAG Knowledge Assistant

Retrieval-Augmented Generation system that ingests PDF/DOCX/TXT documents, generates embeddings via Sentence Transformers, indexes in ChromaDB, and returns source-cited answers to user queries.

- Built document ingestion pipeline supporting PDF, DOCX, and TXT with format-specific parsers.
- Implemented recursive text chunking with overlapping windows for context preservation.

Tech: Python | FastAPI | ChromaDB | Sentence Transformers | PostgreSQL | Redis/RQ

AI Document Intelligence Platform

Backend pipeline for concurrent document uploads, structured data extraction, and heavy processing workloads using Redis/RQ background workers with status tracking and retry logic.

- Built document upload and validation APIs supporting PDF, DOCX, and TXT formats.
- Implemented Redis/RQ background job processing for long-running document extraction tasks.

Tech: Python | FastAPI | PostgreSQL | Redis/RQ | Docker | Pytest

Medical Event Automation Platform

Backend system for managing medical event registrations, attendee workflows, and automated email communication via Redis/RQ background queues with SMTP integration.

- Built REST APIs for event and attendee registration management with relational data models.
- Designed PostgreSQL schemas using SQLAlchemy for events, attendees, and registration workflows.

Tech: Python | FastAPI | PostgreSQL | Redis/RQ | SMTP | Docker

AI Lead Qualification & CRM Automation

Receives inbound leads via REST API, uses Groq LLM to classify and score them, maintains a full PostgreSQL audit trail, and asynchronously syncs qualified leads to an external CRM via Celery workers.

- Built REST API for lead creation, listing, and retrieval with Pydantic email validation.
- Implemented AI service layer with Groq LLM for lead classification and structured output validation.

Tech: Python | FastAPI | PostgreSQL | Celery | Redis | Groq LLM | Docker

Technical Skills

Ahmed Mohamed Abdelatif

Python Backend Developer | AI Automation Specialist

Cairo, Egypt | ahmeedmohaaamed1@gmail.com | github.com/ahmed-abdelatif | linkedin.com/in/ahmed-mohamed-b69920435

Backend Engineering: Python, FastAPI, REST APIs, Pydantic
Databases & Queues: PostgreSQL, Redis, RQ, Celery
Integrations & Automation: Meta WhatsApp Cloud API, SMTP, Webhooks, Groq LLM
AI & Vector Retrieval: RAG, ChromaDB, Sentence Transformers, Embeddings
Computer Science Core: Data Structures, Algorithms, OOP, Clean Code
Tools & DevOps: Git, Docker, Linux, Pytest
Languages: Arabic (Native), English (Professional Working Proficiency)

Education

B.Sc. Computer Science

Egyptian Chinese University (ECU) - Cairo

Currently enrolled · Expected Graduation: 2029

Coursework: Data Structures · Algorithms · Databases · OOP · Software Engineering

Certifications (9 - HackerRank)

Python (Basic) | SQL (Basic) | SQL (Intermediate)
SQL (Advanced) | REST API (Intermediate) | Problem Solving (Basic)
Problem Solving (Intermediate) | Software Engineer | Software Engineer Intern

Outside the Code

I enjoy exploring how systems work, experimenting with AI tools, and practicing algorithms. I'm also curious about cybersecurity and how AI can make systems smarter and safer.

I'm looking for a team where I can contribute to real backend and automation problems, keep growing as an engineer, and build systems that actually get used.
